

WSQ COURSEWARE

Agentic AI for Product Development

Assessment Plan

Course Code	TGS-2024045799
Technical Skills and Competencies	ICT-TEM-4035-1.1 Automation Management in Product Development
Version	v7.0
Release Date	11 September 2026
Training Provider	Tertiary Infotech Academy Pte. Ltd. (UEN 201200696W)
Trainer	Dr Alfred Ang

Controlled document. Verify the version before use.

Document Control

Document	Version	Date	Owner	Change summary
Assessment Plan	6.0	Prior release	Tertiary Infotech Academy Pte. Ltd.	Legacy chatbot courseware retained as historical reference
Assessment Plan	7.0	11 September 2026	Tertiary Infotech Academy Pte. Ltd.	Agentic AI product-development remap using both supplied eBooks; visual deck, twelve independent activities, aligned WA-SAQ and PP

Contents

Document Control.....	2
Contents.....	2
1. Assessment decision.....	3
2. Instrument structure.....	3
3. Knowledge coverage.....	3
4. Ability coverage.....	4
5. Evidence and judgment rules.....	4
6. Administration and moderation.....	4
7. References.....	4

1. Assessment decision

Competence is established through one 60-minute Written Assessment and one 60-minute Practical Performance. The written paper tests K1 to K6; the performance paper requires three observable tasks covering A1 to A3. Both instruments use the same product-development mechanisms, activity evidence and governance boundaries taught in class.

2. Instrument structure

Instrument	Duration	Items	Coverage	Evidence
Written Assessment SAQ	60 min	6 questions	K1–K6	Six open-ended responses
Practical Performance	60 min	3 tasks	A1–A3	Builder evaluation, optimised workflow and governed deployment decision

3. Knowledge coverage

Code	Question	Evidence expected	Taught source
K1	Q1	Lifecycle applications and supported decisions	Topic 1 lifecycle map; Topic 2 journey orchestration
K2	Q2	Resources, skills, common task and sensitivity	Topic 1 builder comparison and readiness
K3	Q3	Quality, reliability, latency, cost and review measures	Topics 2–3 evaluation and observability
K4	Q4	Workflow, contracts, optimisation and rollout practices	Topics 1–3 control mechanisms
K5	Q5	User value, benefits, trade-offs and recovery	Topics 1 and 3 product principles
K6	Q6	API, schema, retrieval, evaluation and security skills	Topics 2 and 3 integration architecture

4. Ability coverage

Code	Task	Observed performance	Aligned activities
A1	Task 1	Compare builders and recommend a fit-for-purpose option	Activities 01–04
A2	Task 2	Design and optimise a bounded agentic workflow	Activities 05–08
A3	Task 3	Evaluate deployment benefits and trade-offs	Activities 09–12

5. Evidence and judgment rules

- Award competence only when every assigned criterion is demonstrated with relevant, authentic and sufficient evidence.
- Accept alternative wording or tools when the mechanism, control and evidence satisfy the printed criterion.
- Do not accept unsupported agent output, invented sources, missing human ownership or unverified completion claims.
- Record clarification prompts without coaching the learner toward the model answer.
- Keep answer keys, marking guidance and assessor notes in trainer-private storage.

6. Administration and moderation

- Use the current v2 candidate and answer-key pair for each instrument.
- Provide candidate papers through the LMS; do not attach answer keys to learner-facing records.
- Moderate a sample of decisions across all three abilities and all six knowledge criteria.
- Retain assessment evidence and outcomes according to the organisation's approved records policy.
- Apply the approved appeal and reassessment workflow when a candidate disputes the outcome.
