

WSQ COURSEWARE

Agentic AI for Product Development

Facilitator Guide

Course Code	TGS-2024045799
Technical Skills and Competencies	ICT-TEM-4035-1.1 Automation Management in Product Development
Version	v7.0
Release Date	11 September 2026
Training Provider	Tertiary Infotech Academy Pte. Ltd. (UEN 201200696W)
Trainer	Dr Alfred Ang

Controlled document. Verify the version before use.

Document Control

Document	Version	Date	Owner	Change summary
Facilitator Guide	6.0	Prior release	Tertiary Infotech Academy Pte. Ltd.	Legacy chatbot courseware retained as historical reference
Facilitator Guide	7.0	11 September 2026	Tertiary Infotech Academy Pte. Ltd.	Agentic AI product-development remap using both supplied eBooks; visual deck, twelve independent activities, aligned WA-SAQ and PP

1. Facilitation purpose

This guide helps the facilitator deliver a two-day evidence-led course in which learners evaluate agentic AI builders, design and optimise a product-development workflow, and make a governed deployment recommendation. Use the deck for mechanisms and discussion; use the Learner Guide and activity folders for all detailed procedures.

2. Delivery controls

- Use synthetic or approved data only. Do not let learners connect live product, customer or payment systems.
- Require source IDs for material claims and label inference, uncertainty and contradiction.
- Keep consequential actions behind a meaningful human gate with a named owner.
- Accept completion only when the output, verifier result and decision evidence meet the stated rule.
- Keep candidate papers learner-facing and answer keys trainer-only.

3. Topic facilitation map

Topic	Facilitation emphasis	Evidence artifact	Common misconception
1	Start from observable user friction; compare builders on one frozen task.	Opportunity brief, claim ledger, weighted matrix	A polished agent output is evidence.
2	Bound roles, tools, handoffs and stop conditions; optimise one causal layer.	Workflow canvas, PRD, evaluation set, experiment ledger	More agents automatically improve quality.
3	Balance value, quality, cost, risk and recovery in deployment decisions.	Architecture, risk register, KPI tree, rollout scorecard	A successful prototype is production-ready.

4. Activity facilitation and debrief

Activity	Required output	Human gate	Debrief question
01 Frame a Product Opportunity	Completed opportunity brief and assumption register	Required	What evidence changes the product decision, and what remains uncertain?
02 Compare Agentic AI Builders	Weighted builder comparison with sensitivity check	Required	What evidence changes the product decision, and what remains uncertain?
03 Build a Research Evidence Pack	Claim ledger, competitor matrix and three prioritised insights	Review checkpoint	What evidence changes the product decision, and what remains uncertain?
04 Create Persona and JTBD Map	Two persona cards, JTBD statements and validation plan	Required	What evidence changes the product decision, and what remains uncertain?
05 Design an Agent Workflow Canvas	Workflow canvas and responsibility matrix	Required	What evidence changes the product decision, and what remains uncertain?
06 Create an AI-Ready PRD	Lean PRD, story map and acceptance set	Required	What evidence changes the product decision, and what remains uncertain?
07 Engineer a Prompt and Evaluation Set	Versioned prompt, 20-case evaluation CSV and scoring rubric	Review checkpoint	What evidence changes the product decision, and what remains uncertain?
08 Run a Prototype Experiment	Experiment ledger with before-after scores and decision	Required	What evidence changes the product decision, and what remains uncertain?
09 Select a Deployment Posture	Deployment matrix, reference architecture and fallback path	Required	What evidence changes the product decision, and what remains uncertain?
10 Conduct a Risk and Control Review	Risk register, permission map and control test plan	Required	What evidence changes the product decision, and what remains uncertain?
11 Design KPI and Feedback Dashboard	KPI tree, alert table and feedback taxonomy	Review checkpoint	What evidence changes the product decision, and what remains uncertain?
12 Deliver a Governed Product Recommendation	One-page decision memo and 90-day rollout scorecard	Required	What evidence changes the product decision, and what remains uncertain?

5. Assessment facilitation

- Brief both instruments before the assessment starts and verify learner identity.
- Allow 60 minutes for the six-question Written Assessment and 60 minutes for the three-task Practical Performance.
- The Written Assessment covers K1 to K6; the Practical Performance covers A1 to A3 using Activities 01 to 12.
- Observe the practical process and retain the requested product artifacts, evaluation evidence and decision rationale.
- Record the outcome and follow the approved appeal and reassessment process where required.

6. Diagnostic prompts

Observed issue	Facilitator probe	Expected repair
Unsupported insight	Which source rows support and contradict this claim?	Add claim-level citations and confidence.
Tool-first recommendation	What user decision and common test drove selection?	Return to opportunity, criteria and sensitivity.
Unbounded autonomy	Where are authority, stop and escalation boundaries?	Add least privilege and human approval.
Demo-only success	What frozen cases, thresholds and regressions were checked?	Run the full evaluation set and classify failures.
Unowned alert	Who acts, by when and on what evidence?	Name an owner, response and escalation timer.
